

PRODUCT INFORMATION

TAROFORCE PP 40-12

Polypropylene 40% long glass fibres reinforced chemically coupled to the resin matrix, resulting in high strength and stiffness combined with high heat deflection resistance. The impact properties and the creep resistance are highly increased due to the fibre skeleton structure formed in the parts.

ISO short Form ISO 1043: PP-GF40 Pellets (12 mm length)

Key Features

- Very isotropic shrinkage minimizing the warpage
- High impact strength and creep resistance
- High strength and stiffness combined with high heat deflection resistance

Availability

- L = UV stabilized grade
- HT = high heat ageing stability grade
- H = heat ageing stability grade
- E = Low emission grade
- C = Concentrate grade
- Natural and Black colours

Process

- INJECTION MOULDING

Application

- Functional / structural parts with critical technical requirements
- Furniture
- Seat modules
- Central console carriers
- Hatchback door modules
- Lift-gate modules
- Gear shift boxes
- Battery holders
- Instrument panel carriers
- Door module carriers
- Front end carriers
- Automotive

Notes

It is normally not necessary to dry TAROFORCE, however should there be surface moisture (condensate) on the moulding compound as a result of incorrect storage, drying process is required. TAROFORCE can be stored in standard conditions until processed. TAROFORCE can be processed on a standard injection moulding unit. A general purpose metering screw is recommended with a zone distribution of 40% feed, 40% transition and 20% metering. A free flow check ring assembly is recommended. When a machine is being shut down from moulding TAROFORCE long glass fibres reinforced materials, the machine should be purged with PE or PP. When the heating cylinder is completely purged of Taroforce material the machine may be shut down. When using blended materials, special care should be taken to prevent segregation in the feed hopper. The processing parameters like processing temperatures are a recommendation and can be adjusted in function of injection machine or extruder size, part geometry and design.
