

7013 Domat/Ems, 03 June 2015

**EU-Directives 2011/65/EU (RoHS) and 2012/19/EU (WEEE)**

Dear Sir, dear Madam,

We confirm that our materials Grilon, Grilamid, Griflex, and Grivory, in all colours, do not contain any lead (Pb), cadmium (Cd), mercury (Hg), hexavalent chromium (Cr-VI), PBB (polybrominated biphenyl) or PBDE (polybrominated diphenyl ethers) as well as phthalate plasticizers (DEHP, BBP, DBP, DIBP) or hexabromocyclododecane (HBCDD) as part of their formulation and are therefore in compliance with the "RoHS"-Directive 2011/65/EU (repealing Directive 2002/95/EC).

Parts produced from those materials are not subject to "selective treatment" according to Directive 2002/95/EC on Waste Electrical and Electronic Equipment ("WEEE", repealing Directive 2002/96/EC).

In our glass fibre reinforced materials, lead as a natural impurity of the raw materials can be found with a concentration < 0.01 %. According to Directive 2011/65/EU, article 4, §2, resp. annex II, lead with a concentration of maximum 0.1 % shall be tolerated.

Our products do not contain any **Deca-BDE** as a part of their formulation and are therefore in compliance with the Judgment of the European Court of Justice (Grand Chamber) 2008/C116/04 of April 1, 2008, annulling Commission Decision 2005/717/EC of October 13, 2005, which had exempted Deca-BDE from prohibition of use.

Kind regards
