

HYCLEANSE® 274A

Entec Polymers - Low Density Polyethylene

Tuesday, November 5, 2019

General Information

Product Description

HyCleanse-274A rapidly cleans plastic processing equipment. With a robust formulation of proprietary additives. Downtime for cleanup can be minimized allowing for a quicker, more economical transition from one job to another. Additionally, HyCleanse-274A helps prevent polymer degradation by cleansing difficult regions of an extruder and preventing accumulation of charred and degraded material. With an advanced formulation from generation I, this product is excellent for a shutdown purge, allowing easy elimination on next startup and guarding against degradation due to prolonged heat exposure.

Description

Masterbatch concentrate based on LDPE.

Applications

HyCleanse-274A can be utilized in film extrusion equipment, profile extrusion, wire coating, blow molding, injection molding and compounding lines. In addition, HyCleanse-274A is exceptionally helpful in those instances where recyclable content is key to economics. It can be used for all olefins.

General

Material Status	• Commercial: Active
Availability	• North America
Additive	• Proprietary
Features	• Food Contact Acceptable
Uses	• Purging Compound
Agency Ratings	• FDA Food Contact, Unspecified Rating
